Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                 The invention relates to transmembrane decoy-receptor (tmst2) proteins and their secreted splice variants, belonging to the tumour necrosis factor (TNF) receptor super gene family and polymucleotides encoding such proteins. The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, uital, bacterial and parasitic diseases or cancer. They may also be used for chromosome identification or mapping. The invention is useful in gene therapy. The present sequence is mouse tmst2-receptor cDNA used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a protein designated 7F4. This protein is acapable of inducing differentiation in osteoblast cells. The protein may be used to screen compounds for the ability to bind to it, for use as ligands, agonists or antagonists and inhibiting or otherwise altering its differentiation inducing activity. Compounds so identified, as well as the protein itself, DNA encoding it, and antibodies to it, may be used in the treatment of diseases of bone growth and osteoblast differentiation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     200

The transgenic animals are a disease model for bone and glycolipid metabolism disorders. Substances identified by the screening method are agints for the prevention and treatment of diseases including osteoporosis, obesity and diabetes. The present sequence represents the modified mouse 7F4 encoding sequence.

diseases or susceptibility to diseases related to the presence of mutated ymkz5-receptor gene such as tumours or cancers. The sequences of the invention are used as medication for a number of diseases such as acquired immune deficiency syndrome (AIDS), anaemia, autoimmune diseases, cachexia, leprosy, leukaemia, hepatitis, multiple sclerosis, myocardial ischaemia, obesity etc. The invention is also useful in gene therapy. The present sequence is mouse ymkz5 receptor CDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to transmembrane decoy-receptor (tmst2) proteins and their secreted splice variants, belonging to the tumour necrosis factor (TNP) receptor super gene family and polymucleotides encoding such proteins. The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome identification or mapping. The invention is useful in gene therapy. The present sequence is mouse tmst2-receptor splice variant cDNA used in the

and their secreted splice variants, belonging to the tumour necrosis factor (TNF) receptor super gene family and polynucleotides encoding such proteins. The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome identification or mapping. The invention is useful in gene therapy. The present sequence is a chimeric DNA comprising mouse tmst2- receptor DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GACCGGAAATGCCAGTGCCGAACAGGTCTTTACTACTATGACCCAAAATTTCCAGAATCG 432
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a tmst2-receptor polypeptides and the polynucleotide encoding them. The sequences of the invention are useful for treating diseases and conditions including acquired immunodeficiency syndrome (AIDS), anaemia, diseases, cachexia, cancer, cerebral malaria, diabetes mellitus, disseminated intravascular coagulation, haemorrhagic shock, hepatitis, insulin resistance, leprosy, leukaemia, lymphoma, meningitis, multiple sclerosis, ischaemia, obesity, organ rejection, rheumatoid arthritis, septic shock, stroke, adult respiratory distress syndrome (ARDS), tuberculosis and a number of viral diseases. This sequence represents cDNA encoding a murine tmst2-Fc fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel tmst2-receptor polypeptide useful for diagnosing and treating disease e.g., autoimmune disease, cachexia, cancer or viral, bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 ATGITITGCCTICTTCTGCAGCTIGGTGTCCAGTCTGAGTCGCTGGTTCCTTTGGCGGCGG

The invention relates to a novel array comprising at least two isolated nucleotide molecules, each molecule having a sequence capable of uniquely hydridising to a nucleic acid molecule which is an expression product of a gene involved in mitochondrial biology. The array comprises two or more isolated nucleic acid molecules or spots, each molecule having a sequence chosen from sequence of 994 human probes and 2046 mouse probes. An array consen from sequence of 994 human probes and 2046 mouse probes. An array of the invention is useful for determining an expression profile of a mouse or human sample containing nucleic acid, by contacting the array with the sample under conditions allowing selective hybridisation, and measuring hybridisation of mucleic acid in the sample to the array to produce an expression profile. The array is also useful for determining an expression profile. The array is also useful for determining an expression profile diagnostic of an energy metabolism. Condition and array of the invention is useful for related physiological condition. An array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array of the invention is useful for a faced array and array of the invention is useful for a faced array array is 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diagnostic of energy metabolism-related physiological conditions, diagnosing such physiological conditions, identifying blochemical pathways, genes, and mutations involved in such physiological conditions, identifying therapeutic agents useful for preventing and/or treating such physiological conditions, evaluating and/or monitoring the efficacy of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 56
such therapies, and creating and identifying animal models of human energy metabolism-related physiological conditions. An array is also useful for defining expression signatures or profiles for mitochondrial diseases, as well as distinguishing clinical disorders that result from oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress, apoptosis and aging. An array of the invention contains probes of genes not previously recognised to participate in mitochondrial biology. The sequences shown in ADD33224-ADD32560 represent murine mitochondrial DNA clones used to make the probes of the invention. Some sequences are not present, these are SEQ ID NO'8 295, 1174, 1213, 1700, 1728, 1730, 1905,

                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel array comprising at least two isolated hucleotide molecules, each molecule having a sequence capable of uniquely hybridising to a nucleic acid molecule which is an expression product of a gene involved in mitochondrial biology. The array comprises two or more chosen from sequence of 994 human probes and 2046 mouse probes. An array of the invention is useful for determining an expression profile of a mouse or thuman sample containing mucleic acid, by contacting the array of the invention is useful for determining an expression profile. The array is also useful for determining mucleic acid, by contacting the array to produce an expression profile. The array is also useful for determining on expression profile. The array is also useful for determining an expression profile ample containing mucleic acid an expression profile of a first labelled sample containing mucleic acid. The second sample is a reference or a standard. An array is useful for actermining mitochondrial biology gene expression profiles of an emergy-metabolism. Cor determining mitochondrial biology gene expression profiles of an energy-metabolism call as human, mice and closely related species, tissue and organs of unch as human, mice and closely related species, tissue and organs of alagnostic of energy metabolism-related physiological conditions, and mutations insured physiological conditions, diagnostic of energy metabolism-related physiological conditions, closely related species, tissue and organs of pathways genes, and mutations insured physiological conditions, closely related species, tissue and organs of dentifying therapeutic agence useful for determining and/or treating such physiological conditions, ending and organism and creating and identifying animal models of human energy metabolism-related physiological conditions. An array is also onergy metabolism-related physiological conditions. Organism onergy metabolism-related physiological conditions or physiological conditions, evaluating and identifying t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           141 ACACTCCTTCAAATGTCCCCGCTGGTGAATACTGGTCTAAAGACGTCTGTTGGAAGAACTG 200

The invention relates to transmembrane decoy-receptor (tmst2) proteins and their secreted splice variants, belonging to the tumour necrosis factor (TMP) receptor super gene family and polymucleotides encoding such proteins. The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome identification or mapping. The invention is useful in gene therapy. The present sequence is mouse tmst2-receptor cDNA used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

```
The invention relates to a tmst2-receptor polypeptides and the polynucleotide encoding them. The sequences of the invention are useful for treating diseases and conditions including acquired immunodeficiency syndrome (AIDS), anaemia, autoimmune diseases, cachexia, cancer, cerebral malaria, diabetes mellitus, disseminated intravascular coagulation, haemorrhagic shock, hepatitis, insulin resistance, leprosy, leukaemia, lymphoma, meningitis, multiple sclerosis, ischaemia, obesity, organ rejection, rheumatoid arthritis, septic shock, stroke, adult respiratory distress syndrome (ARDS), tuberculosis and a number of viral diseases. This sequence represents a murine tmst2-receptor cDNA clone of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CATACTCAAGGACAATGTGAGAAGTGTCACCCAGGAACATTCACAGAGAAAGATAATTAC 300

```
The invention describes an isolated murine polynucleotide (I) comprising a contiguous stretch of at least 60 nucleotides of one of 265-677 nucleotide 891 OMNIBANK gene trapped sequences (GTS8) (S), given in the specification. The novel genes and cells are useful in functional genomic diagnostic agents and methods. (I) is useful for identifying the coding regions of the murine genome, to isolate CDNAs, genomic clones, or full-length genes/polynucleotides or homologues, heterologues, paralogues, or orthologues that are capable of hybridising to one or more of the GTSs under stringent conditions. (I) can be incorporated into a phage display system that can be used to screen for proteins, or other ligands, that care capable of binding an amino acid sequence encoded by an oligonucleotide or polynucleotide sequence in at least one of the TS sequences. (I) is useful in addressable arrays, such as gene chips, to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel murine polynucleotides that individually identify novel genes into which a retroviral gene trap vector has integrated, useful in genomic analysis and in discovery, development of therapeutic and diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      phage display system; gene chip; temporal gene expression; tissue specific gene expression; antisense inhibition; gene targeting; development disorder; cell differentiation disorder; aqing; cancer; autoimmune disease; lupus; inflammatory disorder; skin disorder; degenerative disorder; ds.

technology

identify and characterise temporal and tissue specific gene expression, to identify the gene of interest from many sources and for genetic manipulations such as antisense inhibition and gene targeting. Decreasing the level of expression of (1) and/or down regulating the activity of peptides or proteins encoded by (1) is useful for treating development and cell differentiation disorders, aging, cancer, autoimmune disease, lupus, inflammatory disorders, skin disorders and degenerative disorders. This sequence represents a murine cDNA isolated using gene trap

```
The invention relates to transmembrane decoy receptor, ymkz5 belonging to tumour necrosis factor (TNP) receptor supergene family and nucleic acid sequences encoding such receptors. The invention is useful for detecting diseases or susceptibility to diseases related to the presence of mutated ymkz5-receptor gene such as tumours or cancers. The sequences of the invention are used as medication for a number of diseases such as acquired immune deficiency syndrome (AIDS), anaemia, autoimmune diseases, cachexia, leprosy, leukaemia, hepatitis, multiple sclerosis, myocardial ischaemia, obesity etc. The invention is also useful in gene therapy. The
                      Novel ymkz5-receptor polypeptide useful for treating diseases such as tumor, cancer, AIDS, anemia, autoimmune diseases, cachexia, leprosy, leukemia, hepatitis, multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                      present sequence is mouse ymkz5 receptor cDNA.
                                                                                                                               Example 1; SEQ ID NO 5; 57pp; English.

Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23603435.
The sequence in this assembly is a combination of Bake based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contigs acaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12;
